## Avalere

## Source and Methodology for Average Annual Living Expenses of Households Under 200\% of FPL

Source: Bureau of Labor Statistics Consumer Expenditure Survey, 2013
The Consumer Expenditure Survey is the only Federal survey to collect a complete range of consumer expenditures and incomes, by characteristic of consumer. The primary purpose of the CES is to update the Consumer Price Index, one of the the most widely used measures of inflation. The data are aggregated from the Quarterly Interview Survey and the Diary Survey which collect information on American consumer buying habits, including expenditures, income and consumer unit characteristics.
http://www.bls.gov/cex/

## Methodology:

This analysis is limited to households with an individual age 65+ and to households with income under 200 percent of the Federal Poverty Level. Unweighted observations are the number of households with an individual age 65+ and income below 200 percent of the FPL, by size of household and state, that reported expenditures for any given quarter of 2013 . Weighted observations estimate the actual number of households based on a state's population size and breakdown of household sizes. Expense variables are averaged over all unweighted observations and then annualized to provide an annual estimate.

## Variables:

Housing
Food
Transportation
Health Care
Total

Annualized shelter, utilities, housing operations and home furnishings expenses.
Annualized food expenses.
Annualized transportation expenses.
Annualized out-of pocket health care expenses.
Sum of housing, food, transportation and health care.

## Limitations:

States with household sizes with a low number of unweighted observations have a higher risk for data influenced by outliers. For example, the average annual out-of-pocket health care expenses for a household size of one in Minnesota is $\$ 0$. Since this is based off of two unweighted observations, it is possible that the data is not as reflective of what out-of-pocket costs for a household size of one in Minnesota actually spends.

Several state are not included in the analysis due to an absence of unweighted observations that met the inclusion criteria: Arkansas, Iowa, Mississippi, Montana, New Mexico, North Carolina, North Dakota, Oklahoma, Rhode Island, South Dakota, Vermont, West Virginia, Wyoming.

This analysis excludes respondents that did not specify their state of residence.

| State Name | Household Size | Unweighted Observations | Weighted Observations | Housing | Food | Transportation | Health Care (out-ofpocket costs) | Total |
